

BGA824N6

Silicon Germanium Low Noise Amplifier for Global Navigation Satellite Systems (GNSS)

Features

- Operating frequencies: 1164 - 1615 MHz
- Insertion power gain: 17.0 dB
- Input 1 dB compression point: -6 dBm
- Low noise figure: 0.55 dB
- Low current consumption: 3.8 mA
- Digital on/off switch
- Ultra small TSNP-6-2 and TSNP-6-10 leadless package
- RF output internally matched to 50 Ohm
- Low external component count

Application

Ideal for all Global Navigation Satellite Systems (GNSS) like GPS, GLONASS, Beidou, Galileo and others.

Product Validation

Qualified for industrial applications according to the relevant tests of JEDEC47/20/22

1 Features

- Insertion power gain: 17.0 dB
- Out-of-band input 3rd order intercept point: +7 dBm
- Input 1 dB compression point: -6 dBm
- Low noise figure: 0.55 dB
- Low current consumption: 3.8 mA
- Operating frequencies: 1164 - 1615 MHz
- Digital on/off switch
- Supply voltage: 1.5 V to 3.6 V
- Ultra small TSNP-6-2 and TSNP-6-10 leadless package (footprint: $0.7 \times 1.1 \text{ mm}^2$)
- B7HF Silicon Germanium technology
- RF output internally matched to 50 Ohm
- Low external component count
- 2kV HBM ESD protection (including AI-pin)
- Pb-free (RoHS compliant) package

Features

Description

The BGA824N6 is a front-end low noise amplifier for Global Navigation Satellite Systems (GNSS) from 1164 MHz to 1615 MHz like GPS, GLONASS, Beidou, Galileo and others. The LNA provides 17.0 dB gain and 0.55 dB noise figure at a current consumption of 3.8 mA in the application configuration described in [Chapter 4](#). The BGA824N6 is based upon Infineon Technologies' B7HF Silicon Germanium technology. It operates from 1.5 V to 3.6 V supply voltage.

1) All voltages refer to GND-Node unless otherwise noted

2) T_S is measured on the ground lead at the soldering point

Attention: Stresses above the max. values listed here may cause permanent damage to the device. Maximum ratings are absolute ratings; exceeding only one of these values may cause irreversible damage to the integrated circuit. Exposure to conditions at or below absolute maximum rating but above the specified maximum operation conditions may affect device reliability and life time. Functionality of the device might not be given under these conditions.
